

SAFE AND EFFECTIVE BODY
ENHANCEMENT

BioSonic

Pulsating vacuum massage + soft laser 635 nm

- + the Soft 940 nm laser beam
- + ultrasound 1 MHz + cold LED light
- + diamond microdermabrasion

**Professional skin care with cellulite reduction,
slimming, skin rejuvenation**

● **Pulsating vacuum massage
+ soft laser 635 nm**

- simultaneous vacuum effects on the skin, collagen, muscles and the nervous system; blood and lymphatic circulation rates are quadrupled, excess water, toxins and decomposed fat are transported to the kidneys and excreted and cellular metabolism is improved;
- the soft laser, with a 635 nm wavelength, is a visible red beam of light which penetrates the tissue to a depth of 8 - 10 mm .

The facial probe provides the following treatment options: lymphatic drainage, elimination of puffiness, facial sculpting, removal of wrinkles and reduction of pigmentation changes.

The body probe provides the following treatment options: lymphatic drainage, elimination of puffiness, body sculpting and reduction of fat tissue.

● **The Soft 940 nm laser beam**

- is an invisible, infrared light, penetrating the tissue at a depth of 30-80 nm. It stimulates the release of ATP, activates the cellular metabolism, removes wrinkles, reduces melanodermas, smoothens and tautens the skin and narrows dilated pores. Acts on the gastric system, improving stomach and intestinal functionality and stimulating trypsin, an enzyme which produces a feeling of satiety.

● **Ultrasounds 1 MHz + cold LED light**

- ultrasounds 1 MHz allows sonophoresis 6 cm deep
- during the application of ultrasound, seven types of cold LED light are simultaneously emitted. By providing energy, they enhance the absorption of nutritive substances, enhancing the effects of other treatments given:

red - accelerates and stimulates blood circulation, stimulates collagen growth

green - a toxin removing action which reduces pigmentation spots, lightens the skin and prevents infections

blue - compensates sebum secretion, damages acne bacteria, improves wound healing processes and relieves and alleviates skin conditions

purple - enhances lymphatic drainage and renal functions

cyanic - provides care and maintains the alleviation of skin conditions

fresh green - improves the elasticity of blood vessels, alleviates skin sensitivity, improves immunological functions and stimulates lymphatic vessels and the nervous system

white - supports the absorption of nutritive substances and reduces the side effects of radiation (recommended for people spending long hours in front of computer monitors)

● **Diamond microdermabrasion**

- designed for cosmetic procedures on the face and other body areas, including deep skin cleansing and epidermal peeling.
