

Our own patented and innovative  
New machine method of Permanent Make-up  
without pigment dripping, very fast, full controlled

ODED

### PERMANENT MAKE-UP

...giving the permanent feeling of beauty and comfort  
at harmony of nature.

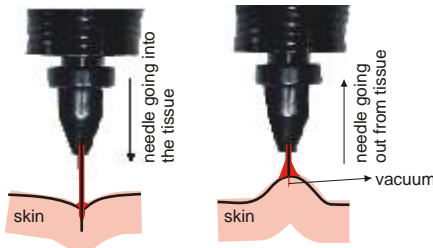

### WHY ARE WE THE BEST?

- there is pricks frequency till 420 strokes per second.
- whole treatment`s time abbreviation is reduced till 15 min.
- Increasing of pigmentation about 300% per time unit.
- decreasing of pain, swelling, irritation.

**WHY ARE WE THE BEST?**

- because we offer unique and peculiar technology with three needles applying, which are working simultaneously and alternately (**protected by copyright and patented by Szwedo Group**)
- unique working speed of this device (**420 strokes per second**), uniformity of pricks frequency and precision of needles penetration to the skin with difference thickness, are provided by engine drive, which are transformed to the gear and connecting rod (like in car`s engine). So , such innovation structure and action of our device make it unique and leading on beauty market, infallible and success guaranteed device destined for performance of durable drawing of eyebrows, eyelids, lips and medical make-up.
- Owing to this design, during the needle going out from the tissue, there are not produced the vacuum effect, which can take out the pigment from the skin (like how doing it, single needle devices of another producers), but

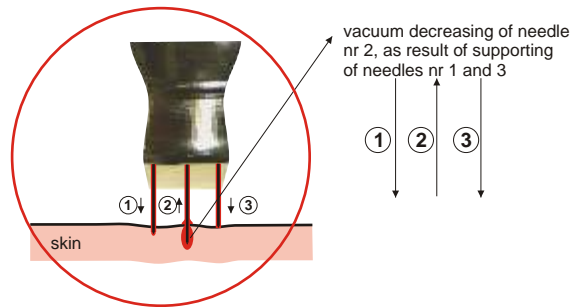

**SINGLE NEEDLE METHOD APPLIED SO FAR.**

Single needle going into the skin

When single needle going out from the skin, a big part of pigment going out as a vacuum consequence

**OUR THREE NEEDLES METHOD**

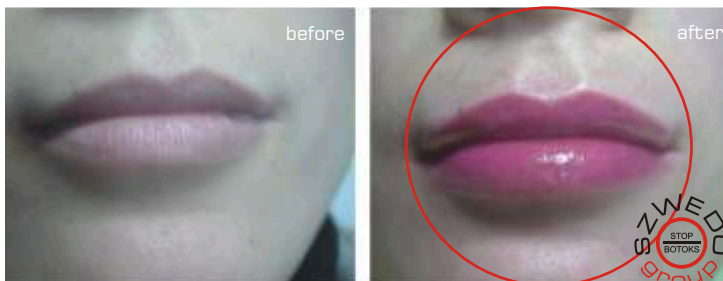

Three needles working alternately and independently penetrating the skin tissue. The speed of going into needles is the same as speed of going out needles. In the same time, two needles going into the skin and one needle going out of the skin. Therefore this vacuum effect is decreased and pigment injection results are increased.

- This engine drive used in our device, providing the frequency and steadiness and needles penetration into the skin tissue about different skin conditions (thickness and hardness).
- The treatment safety is guaranteed by disposable and sterile needles.
- Reduction of vibration providing the perfect performance of permanent make-up.

**THE APPLICATION OF NEW METHOD GAINING OF BENEFITS**

- achievement of pricks frequency from **340- 420** strokes per one second
- whole treatment`s time abbreviation more than **60%**
- Increasing of pigmentation about **300%** per time unit
- minimizing of corrections quantity after treatments (decreasing of treatment`s cost)
- decreasing of pain, swelling and irritation
